CRYPTO ASSET RISK DISCLOSURE

DAPPOS (DOS)

Last updated on August 03, 2026

Disclaimer

Please note that this risk disclosure is not exhaustive of all risks associated with trading DOS. Investors should perform their own assessment to determine the appropriate level of risk for their personal circumstances. Be sure to do your own research and due diligence while taking into account your own financial situation and risk tolerance. Please review the Risk Summary for additional discussion of general risks associated with the assets made available in the platform. These materials are for general information purposes only and are not investment advice or a recommendation or solicitation to buy, sell or hold any crypto asset or to engage in any specific trading strategy. The information contained in this risk disclosure is based on publicly available information that may be inaccurate, incomplete, or change at any time.

What is DOS and how does it work?

DAPPOS is a Web3 operating system that lets users express what they want to do on-chain as an intent and have a network of service providers carry out the underlying steps across different blockchains and applications. Its products include a unified account, an intent-execution network, and xBubble, an AI product suite for building and using AI-driven workflows and applications. The platform is designed to abstract away chain-specific complexity, such as gas payments and cross-chain transfers, so that users can interact with decentralised applications more simply.

At the time of writing the token is not live. The DOS will be used for governance and product decisions across the DAPPOS ecosystem, for staking by ecosystem service providers as performance collateral and service qualification, and for paying transaction and service fees for DAPPOS intent-execution and AI-workflow services. It will also be used to access premium xBubble and AI services, including additional usage credits for stakers, and as a payment token within the xBubble platform economy.

Who is behind the project?

dappOS was co-founded in 2022 by Shen Tianyi and Yang Xinru. Shen Tianyi serves as the project's founder and chief executive officer.

Tokenomics of DOS

The total supply of DOS is 1 billion tokens which is distributed as follows:

DOS Allocation	% of Total supply
Team	20%
Investors	22.5%

Ecosystem	20%
Treasury	20%
Marketing	11.5%
Airdrop	6%
Total	**100%**

General Risks

Like all other digital assets, there are some general risks to investing in DOS. These include short history risk, volatility risk, liquidity risk, demand risk, forking risk, code defects, cryptography risk, regulatory risk, concentration risk, electronic trading risk and cyber security risk. For more information on general risks associated with smart contracts and digital assets, see Kraken's Risk Statement.

Risks specific to DOS

Competition

The DAPPOS network faces competition from other intent-execution and chain-abstraction protocols such as Across Protocol, ZeroDev, and others. DOS's value derives from its broader adoption in the market. If the DAPPOS network fails to achieve sufficient adoption compared to the other options in the market, this could negatively impact the value of DOS.

Due Diligence

Prior to listing on the Kraken platform, Kraken performed due diligence on DOS and determined that DOS is unlikely to be a security or derivative under UK securities legislation. Our analysis generally includes, but is not limited to, reviewing publicly available information on the following:

- The creation, governance, usage and design of DOS, including the source code, security and roadmap for growth in the developer community and, if available, the background of the developer(s) that created DOS;
- The supply, demand, maturity, utility and liquidity of DOS;
- Material technical risks associated with DOS, including any code defects, security breaches and other threats concerning DOS and its supporting blockchain (such as the susceptibility to hacking and impact of forking), or the practices and protocols that apply to them; and
- Legal and regulatory risks associated with DOS, including (i) any pending, potential, or prior civil, regulatory, criminal, or enforcement action relating to the issuance, distribution, or use of DOS, and (ii) consideration of statements made by any regulators or securities regulatory authorities in the UK, other regulators of the International Organization of Securities Commissions, or the regulator with the most significant connection to DOS about whether DOS, or generally about whether the type of crypto asset, is a security and/or derivative.

Don't invest unless you're prepared to lose all the money you invest. This is a high-risk investment and you should not expect to be protected if something goes wrong. Take 2 mins to learn more.
