

PAYWARD LTD
CRYPTO ASSET RISK DISCLOSURE
Keeta (KTA)

Last updated on June 18, 2025

Disclaimer

Please note that this risk disclosure is not exhaustive of all risks associated with trading KTA. Investors should perform their own assessment to determine the appropriate level of risk for their personal circumstances. Be sure to do your own research and due diligence while taking into account your own financial situation and risk tolerance. Please review the [Risk Summary](#) for additional discussion of general risks associated with the assets made available in the platform. These materials are for general information purposes only and are not investment advice or a recommendation or solicitation to buy, sell or hold any crypto asset or to engage in any specific trading strategy. The information contained in this risk disclosure is based on publicly available information that may be inaccurate, incomplete, or change at any time.

What is Keeta Network and how does it work?

Keeta Network is a layer-1 public blockchain that runs on proof-of-stake. Instead of adding each block to a single chain, it records transactions in a graph-shaped ledger; this design is intended to confirm transfers quickly and includes built-in identity and permission features for regulated asset use.

KTA is planned to be Keeta Network's native token, required for gas fees and able to be delegated to a validator to gain voting weight in the network, so holders influence future upgrades through their chosen validator.

Who is behind the project?

Keeta Network is founded and led by Ty Schenk.

Tokenomics of KTA

The total supply of KTA is 1 billion tokens which is distributed as follows:

KTA Allocation	KTA tokens	% of Total supply
Community/ecosystem reserve	500 million	50%
Team	200 million	20%
Early investors	200 million	20%
Foundation treasury	100 million	10%
Total	1 billion	100%

General Risks

Like all other digital assets, there are some general risks to investing in KTA. These include short history risk, volatility risk, liquidity risk, demand risk, forking risk, code defects, cryptography risk, regulatory risk, concentration risk, electronic trading risk and cyber security risk. For more information on general risks associated with smart contracts and digital assets, see Kraken's Risk Statement.

Risks specific to KTA

Competition

Keeta Network faces competition from other proof-of-stake cryptocurrencies such as Solana, Avalanche and Near. KTA's value derives from its broader adoption in the market. If the Keeta Network fails to achieve sufficient adoption compared to other options in the market, this could negatively impact the value of KTA.

Due Diligence

Prior to listing on the Kraken platform, Kraken performed due diligence on KTA and determined that KTA is unlikely to be a security or derivative under UK securities legislation. Our analysis generally includes, but is not limited to, reviewing publicly available information on the following:

- The creation, governance, usage and design of KTA, including the source code, security and roadmap for growth in the developer community and, if available, the background of the developer(s) that created KTA;
- The supply, demand, maturity, utility and liquidity of KTA;
- Material technical risks associated with KTA, including any code defects, security breaches and other threats concerning KTA and its supporting blockchain (such as the susceptibility to hacking and impact of forking), or the practices and protocols that apply to them; and
- Legal and regulatory risks associated with KTA, including (i) any pending, potential, or prior civil, regulatory, criminal, or enforcement action relating to the issuance, distribution, or use of KTA, and (ii) consideration of statements made by any regulators or securities regulatory authorities in the UK, other regulators of the International Organization of Securities Commissions, or the regulator with the most significant connection to KTA about whether KTA, or generally about whether the type of crypto asset, is a security and/or derivative.

Don't invest unless you're prepared to lose all the money you invest. This is a high-risk investment and you should not expect to be protected if something goes wrong. [Take 2 mins to learn more.](#)
