CRYPTO ASSET RISK DISCLOSURE

SoSoValue (SOSO)

Last updated on September 2, 2026

Disclaimer

Please note that this risk disclosure is not exhaustive of all risks associated with trading SOSO. Investors should perform their own assessment to determine the appropriate level of risk for their personal circumstances. Be sure to do your own research and due diligence while taking into account your own financial situation and risk tolerance. Please review the [Risk Summary] for additional discussion of general risks associated with the assets made available in the platform. These materials are for general information purposes only and are not investment advice or a recommendation or solicitation to buy, sell or hold any crypto asset or to engage in any specific trading strategy. The information contained in this risk disclosure is based on publicly available information that may be inaccurate, incomplete, or change at any time.

What is SoSoValue and how does it work?

SoSoValue is an AI based crypto research platform that aggregates onchain, exchange and macro data into dashboards, then applies machine learning models to produce summaries and alerts. A related SSI (SoSoValue Indexes) module lets users create and adjust onchain sector indices built from that data. SoSoValue has since launched ValueChain, its own layer 1 blockchain, and SOSO now circulates on Ethereum, Base and ValueChain according to SoSoValue's own site.

SOSO is the native utility token used for staking to unlock premium AI features, boost rewards and secure whitelist eligibility.

Who is behind the project?

SoSoValue was cofounded by May Wang, Jiva Kwan and Jessie Lo.

Tokenomics of SoSoValue

The total and maximum supply of SOSO are both 1 billion tokens. As of 2026, the circulating supply is approximately 342 million SOSO according to SoSoValue's own site.

General Risks

Like all other digital assets, there are some general risks to investing in *SOSO*. These include short history risk, volatility risk, liquidity risk, demand risk, forking risk, code defects, cryptography risk, regulatory risk, concentration risk, electronic trading risk and cyber security risk. For more information on general risks associated with smart contracts and digital assets, see Kraken’s Risk Statement.

Risks specific to SoSoValue

Competition

The SoSoValue network faces competition from other AI-powered investment and research platforms such as Santiment. SOSO's value derives from its broader adoption in the market. If the SoSoValue network fails to achieve sufficient adoption compared to the other options in the market, this could negatively impact the value of SOSO.

Due Diligence

Prior to listing on the Kraken platform, Kraken performed due diligence on SOSO and determined that SOSO is unlikely to be a security or derivative under UK securities legislation. Our analysis generally includes, but is not limited to, reviewing publicly available information on the following:

- The creation, governance, usage and design of SOSO, including the source code, security and roadmap for growth in the developer community and, if available, the background of the developer(s) that created SOSO;
- The supply, demand, maturity, utility and liquidity of SOSO;
- Material technical risks associated with SOSO, including any code defects, security breaches and other threats concerning SOSO and its supporting blockchain (such as the susceptibility to hacking and impact of forking), or the practices and protocols that apply to them; and
- Legal and regulatory risks associated with SOSO, including (i) any pending, potential, or prior civil, regulatory, criminal, or enforcement action relating to the issuance, distribution, or use of SOSO, and (ii) consideration of statements made by any regulators or securities regulatory authorities in the UK, other regulators of the International Organization of Securities Commissions, or the regulator with the most significant connection to SOSO about whether SOSO, or generally about whether the type of crypto asset, is a security and/or derivative.
