CRYPTO ASSET RISK DISCLOSURE

AI Rig Complex (ARC)

Last updated on August 26, 2026

Disclaimer

Please note that this risk disclosure is not exhaustive of all risks associated with trading ARC. Investors should perform their own assessment to determine the appropriate level of risk for their personal circumstances. Be sure to do your own research and due diligence while taking into account your own financial situation and risk tolerance. Please review the [Risk Summary] for additional discussion of general risks associated with the assets made available in the platform. These materials are for general information purposes only and are not investment advice or a recommendation or solicitation to buy, sell or hold any crypto asset or to engage in any specific trading strategy. The information contained in this risk disclosure is based on publicly available information that may be inaccurate, incomplete, or change at any time.

What is AI Rig Complex and how does it work?

AI Rig Complex (ARC) is an open-source framework designed for building lightweight, modular AI agents that can operate across various environments including blockchains, edge devices, and decentralized networks. According to the team, ARC leverages a Rust-based architecture, named "Rig," which supports multi-agent orchestration, on-chain integration, and semantic computing capabilities.

The project aims to simplify the process of developing AI driven applications, such as chatbots, semantic crawlers, and decentralized governance tools, by using prompts and orchestration logic rather than complex, traditional code. ARC emphasizes deployment flexibility: agents can be run on Solana, Arbitrum, or other blockchain networks, and integrate with tools like large language models (LLMs), vector databases, and edge compute environments. The ARC token may be utilized for accessing agentic AI within the Arc framework ecosystem.

Who is behind the project?

The Arc framework was developed by Playgrounds Analytics Inc. Co-founders of Playgrounds Analytics Inc. include Jephthah Akene and Christophe Vauclair.

Tokenomics of AI Rig Complex

The maximum supply of ARC is 1 billion tokens. The TGE was a fair launch with 100% of the supply available upon launch, with no initial private sales or premined tokens as this was launched on Pump.fun.

ARC Allocation	Percentage
Circulating supply	90%
Arc prize pool and treasury	5.5%
Team	4.5%
Total	**100%**

General Risks

Like all other digital assets, there are some general risks to investing in *ARC*. These include short history risk, volatility risk, liquidity risk, demand risk, forking risk, code defects, cryptography risk, regulatory risk, concentration risk, electronic trading risk and cyber security risk. For more information on general risks associated with smart contracts and digital assets, see Kraken's Risk Statement.

Risks specific to AI Rig Complex

Competition

The AI Rig Complex network faces competition from other AI and agent-based cryptocurrencies such as Fetch.ai, Ocean Protocol, and others. ARC's value derives from its broader adoption in the market. If the AI Rig Complex network fails to achieve sufficient adoption compared to the other options in the market, this could negatively impact the value of ARC.

Due Diligence

Prior to listing on the Kraken platform, Kraken performed due diligence on ARC and determined that ARC is unlikely to be a security or derivative under UK securities legislation. Our analysis generally includes, but is not limited to, reviewing publicly available information on the following:

- The creation, governance, usage and design of ARC, including the source code, security and roadmap for growth in the developer community and, if available, the background of the developer(s) that created ARC;
- The supply, demand, maturity, utility and liquidity of ARC;
- Material technical risks associated with ARC, including any code defects, security breaches and other threats concerning ARC and its supporting blockchain (such as the susceptibility to hacking and impact of forking), or the practices and protocols that apply to them; and
- Legal and regulatory risks associated with ARC, including (i) any pending, potential, or prior civil, regulatory, criminal, or enforcement action relating to the issuance, distribution, or use of ARC, and (ii) consideration of statements made by any regulators or securities regulatory authorities in the UK, other regulators of the International Organization of Securities Commissions, or the regulator with the most significant connection to ARC about whether ARC, or generally about whether the type of crypto asset, is a security and/or derivative.
