

PAYWARD LTD
CRYPTO ASSET RISK DISCLOSURE
Vaulta (A)

Last updated on August 05, 2025

Disclaimer

Please note that this risk disclosure is not exhaustive of all risks associated with trading A. Investors should perform their own assessment to determine the appropriate level of risk for their personal circumstances. Be sure to do your own research and due diligence while taking into account your own financial situation and risk tolerance. Please review the [Risk Summary](#) for additional discussion of general risks associated with the assets made available in the platform. These materials are for general information purposes only and are not investment advice or a recommendation or solicitation to buy, sell or hold any crypto asset or to engage in any specific trading strategy. The information contained in this risk disclosure is based on publicly available information that may be inaccurate, incomplete, or change at any time.

What is Vaulta Network and how does it work?

Vaulta Network is the foundational Layer 1 blockchain that powers fast, low-cost, and user friendly digital finance. It abstracts blockchain complexity with instant transactions, human readable accounts, and minimal fees, while enabling real time settlements, global access to tokenized assets, and climate conscious operation.

The A token is used to send and receive value instantly, pay for CPU/NET bandwidth and RAM on the Vaulta Network, and stake to secure the network and earn rewards.

Who is behind the project?

The Vaulta Network is developed by the Vaulta Foundation led by founder and CEO Yves La Rose.

Tokenomics of A

The A token has a fixed cap of 2.1 billion tokens. New issuance follows four-year halving cycles, with approximately 76 million distributed annually as staking rewards. Strategic reserves include 350 million A allocated for stabilizing the RAM market and 15 million A dedicated to core middleware development. The majority of the supply remains in community circulation.

General Risks

Like all other digital assets, there are some general risks to investing in A. These include short history risk, volatility risk, liquidity risk, demand risk, forking risk, code defects, cryptography risk, regulatory risk, concentration risk, electronic trading risk and cyber security risk. For more information on general risks associated with smart contracts and digital assets, see Kraken's Risk Statement.

Risks specific to A

Competition

The Vaulta network faces competition from other layer 1 blockchains such as Ethereum, Polkadot, and many others. A's value derives from its broader adoption in the market. If the Vaulta network fails to achieve sufficient adoption compared to the other options in the market, this could negatively impact the value of A.

Due Diligence

Prior to listing on the Kraken platform, Kraken performed due diligence on A and determined that A is unlikely to be a security or derivative under UK securities legislation. Our analysis generally includes, but is not limited to, reviewing publicly available information on the following:

- The creation, governance, usage and design of A, including the source code, security and roadmap for growth in the developer community and, if available, the background of the developer(s) that created A;
- The supply, demand, maturity, utility and liquidity of A;
- Material technical risks associated with A, including any code defects, security breaches and other threats concerning A and its supporting blockchain (such as the susceptibility to hacking and impact of forking), or the practices and protocols that apply to them; and
- Legal and regulatory risks associated with A, including (i) any pending, potential, or prior civil, regulatory, criminal, or enforcement action relating to the issuance, distribution, or use of A, and (ii) consideration of statements made by any regulators or securities regulatory authorities in the UK, other regulators of the International Organization of Securities Commissions, or the regulator with the most significant connection to A about whether A, or generally about whether the type of crypto asset, is a security and/or derivative.

Don't invest unless you're prepared to lose all the money you invest. This is a high-risk investment and you should not expect to be protected if something goes wrong. [Take 2 mins to learn more.](#)
